

**IN THE SPECIFICATION:**

*On page 15, please amend the paragraph beginning at line 5 as follows:*

–The SRNC 10 and DRNC 11 each are provided with a Radio Resource Controller functionality RRC 24 and 26, respectively. When the MS 6 is in communication with the controller 10, the RRC protocol has its other termination point correspondingly at the controller 10, while the other termination point is at the mobile station. However, should the controller change, the termination point of the RRC protocol should also be changed correspondingly. More precisely, the new controller 11 should be provided with a similar termination point functionality using similar parameters as the previous controller had. These functionalities will be controlled by a ~~control-unit~~ controller 20 at the source controller 10 and by a ~~control-unit~~ controller 21 at the target controller 11.--
